

OKLO

Oklo Isotopes

From first criticality to a repeatable commercial isotope platform

Fall 2026

Groves-1 Facility | Lockhart, Texas

Disclaimer

ABOUT THIS PRESENTATION
This presentation is provided by Oklo Inc. ("Oklo") for informational purposes only. The information contained herein does not purport to be all inclusive and no representations or warranties, express or implied, are given in, or in respect of, this presentation. To the fullest extent permitted by law, in no circumstances will Oklo or any of its subsidiaries, interest holders, affiliates, representatives, partners, directors, officers, employees, advisors, or agents be responsible or liable for any direct, indirect or consequential loss or loss of profit arising from the use of this presentation, its contents, its omissions, reliance on the information contained within it, or on opinions communicated in relation thereto or otherwise arising in connection therewith.

NO OFFER OR SOLICITATION
This presentation does not constitute an offer to sell or the solicitation of an offer to buy any securities, or a solicitation of any vote or approval, nor shall there be any sale of securities in any jurisdiction in which such offer, solicitation, or sale would be unlawful prior to registration or qualification under the securities laws of any such jurisdiction. This presentation is not, and under no circumstances is to be construed as, a prospectus, an advertisement, or a public offering of the securities described herein in the United States or any other jurisdiction. No offer of securities shall be made except by means of a prospectus meeting the requirements of Section 10 of the Securities Act of 1933, as amended, or exemptions therefrom.

NO REPRESENTATIONS OR WARRANTIES
This presentation is for informational purposes only and does not purport to contain all of the information that may be required to evaluate Oklo. Viewers of this presentation should make their own evaluation of Oklo and of the relevance and adequacy of the information and should make other investigations as they deem necessary. This presentation is not intended to form the basis of any investment decision by any potential investor and does not constitute investment, tax, or legal advice. No representations or warranties, express or implied, are or will be given in, or in respect of, this presentation or any other written, oral, or other communications transmitted or otherwise made available to any party in the course of its evaluation of an investment in Oklo, and no responsibility or liability whatsoever is accepted for the accuracy or sufficiency thereof or for any errors, omissions, or misstatements, negligent or otherwise, relating thereto. To the fullest extent permitted by law, in no circumstances will Oklo or any of its subsidiaries, interest holders, affiliates, representatives, partners, directors, officers, employees, advisors, or agents be responsible or liable for any direct, indirect, or consequential loss or loss of profit arising from the use of this presentation, its contents, its omissions, reliance on the information contained within it, or on opinions communicated in relation thereto or otherwise arising in connection therewith. The information contained in this presentation is preliminary in nature and is subject to change, and any such changes may be material. Oklo disclaims any duty to update the information contained in this presentation.

FORWARD-LOOKING STATEMENTS
This presentation includes statements that express Oklo's opinions, expectations, objectives, beliefs, plans, intentions, strategies, assumptions, forecasts, or projections regarding future events or future results and therefore are, or may be deemed to be, "forward-looking statements." The words "may," "will," "could," "should," "expects," "anticipates," "intends," "plans," "believes," "seeks," "estimates," "continue," "might," "possible," "potential," "predict," "project," "goal," "would," "commit," or, in each case, their negative or other variations or comparable terminology, and similar expressions may identify forward-looking statements, but the absence of these words does not mean that a statement is not forward-looking. These forward-looking statements include all matters that are not historical facts. Forward-looking statements, by their nature, are subject to a variety of assumptions, risks, and uncertainties that could cause actual results or performance to differ materially from the results projected. Many of these risks and uncertainties cannot be controlled by us. Factors that may cause our actual decisions or results to differ materially from those contemplated by these forward-looking statements include, among other things: risks related to the development and deployment of Oklo's powerhouses, fuel fabrication and fuel recycling facilities, and radioisotope production activities;; the risk that Oklo is pursuing an emerging market with no commercial project operating and regulatory uncertainties; risks related to acquisitions, divestitures, or joint ventures we may engage in; the need for financing to construct plants, which remain subject to market, financial, political, and legal conditions; risks related to an inability to raise additional capital to support our business and sustain our growth on favorable terms; the effects of competition; risks related to accessing high-assay low-enriched uranium, plutonium, and other fuels (including recycled fuels) at acceptable costs and under acceptable timelines; risks related to our supply chain; risks related to power purchase agreements or other commercial agreements; risks related to human capital; risks related to our intellectual property; risks related to cybersecurity and data privacy; changes in applicable laws or regulations, including tariffs; the outcome of any government and regulatory proceedings and investigations and inquiries; and those described from time to time in our future reports filed with the U.S. Securities and Exchange Commission (the "SEC"). The foregoing list of factors is not exhaustive. You should carefully consider the foregoing factors and the other risks and uncertainties of the other documents filed by Oklo from time to time with the SEC. The forward-looking statements contained in this presentation are based on current expectations and beliefs concerning future developments and their potential effects on Oklo. There can be no assurance that future developments affecting Oklo will be those that Oklo has anticipated. Oklo undertakes no obligation to update or revise any forward-looking statements to reflect events or circumstances after the date of this presentation, except as may be required by law.

INDUSTRY AND MARKET DATA
This presentation may contain statistical data, estimates, and forecasts that are based on independent industry publications or other publicly available information, as well as other information based on our internal sources. This information involves many assumptions and limitations, and you are cautioned not to give undue weight to these estimates. We have not independently verified the accuracy or completeness of the data contained in these industry publications and other publicly available information. Accordingly, we make no representations as to the accuracy or completeness of that data nor do we undertake to update such data after the date of this presentation. The inclusion of, or references to, links or third-party data or information does not constitute endorsement or verification by Oklo of such websites, data, or information.

01 | Vision

Why Isotopes.
Why Oklo.
Why Now.

OKLO

Groves-1 went from greenfield site to an operational nuclear facility in just over 11 months.

September 2025
Groundbreaking

March 2026
Substantial construction underway

August 2026
First criticality

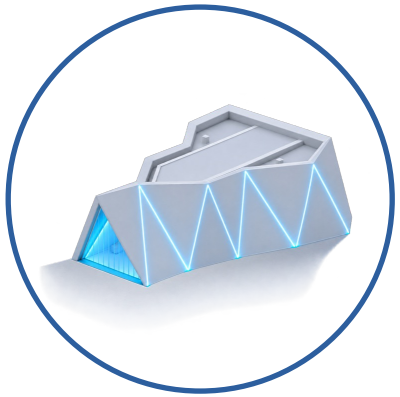

Demonstrates Oklo's ability to site, construct, authorize, commission, and start up nuclear infrastructure on an accelerated timeline.(1)

Sources:
(1) Locations of Nonpower Production and Utilization Facilities

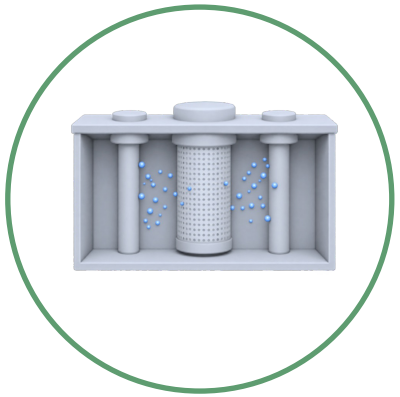

Isotopes is the third business in Oklo's vertically integrated nuclear technology platform.

Shared nuclear capabilities can create value across power, fuel, and isotope production.

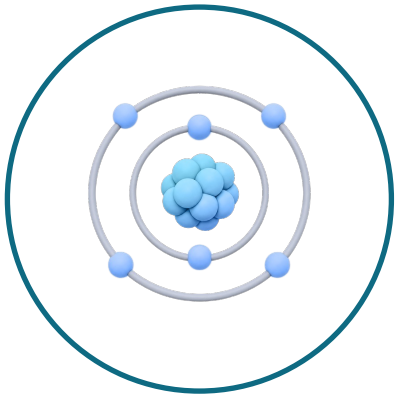

Power & Heat

Customer energy demand creates recurring power, fuel, and waste management needs.

Fuel & Recycling

Recycling closes the fuel cycle, extends fuel supply, and can recover valuable materials.

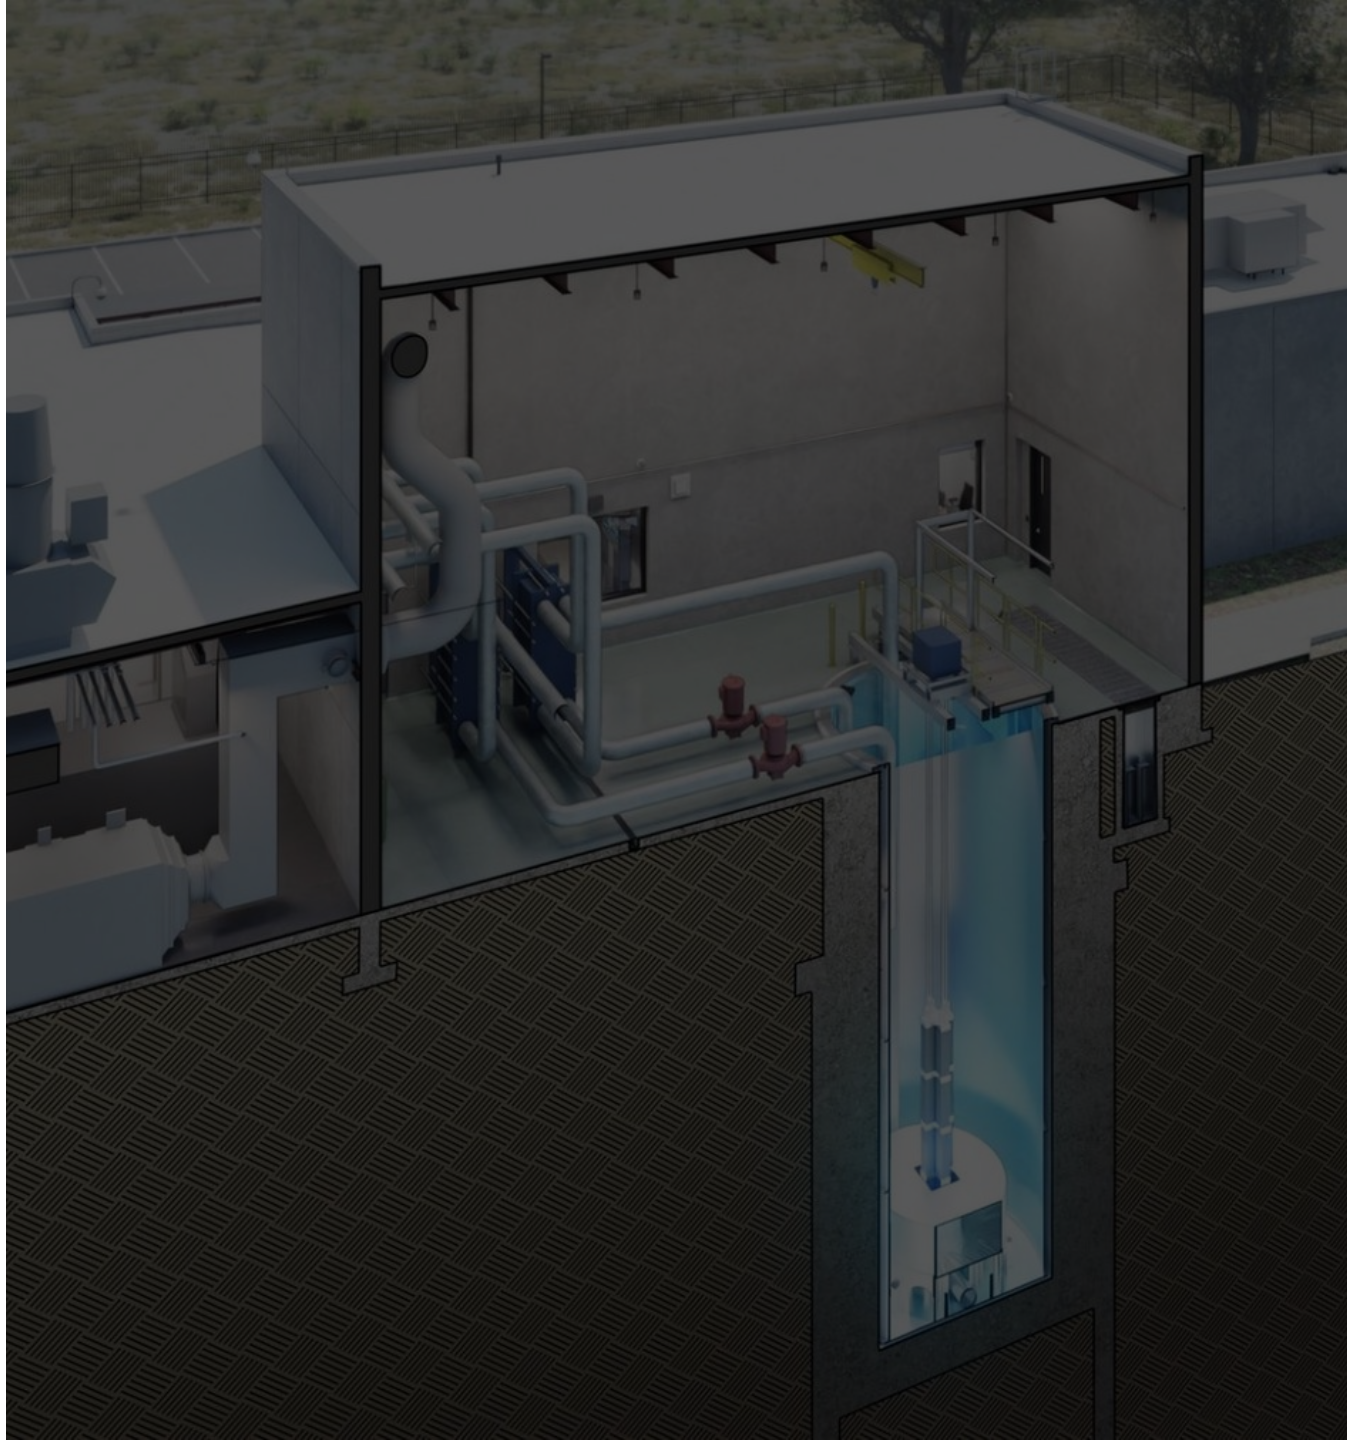

Isotopes

Dedicated production and recycled material recovery address scarce, high-value products.

Shared execution engine across the business

Siting • Engineering • Nuclear QA • Procurement • Authorization • Commissioning • Operations

Market and commercial strategy

Radioisotopes are essential inputs across critical sectors.

Healthcare is Oklo's initial commercial focus, with broader opportunities across industry, space, national security, and research.

Healthcare

- Targeted cancer therapy
- Diagnostic imaging
- Tumor detection and treatment planning

Space & defense

- Long-duration spacecraft power
- Remote and extreme-environment systems
- Mission-critical energy sources

Industrials

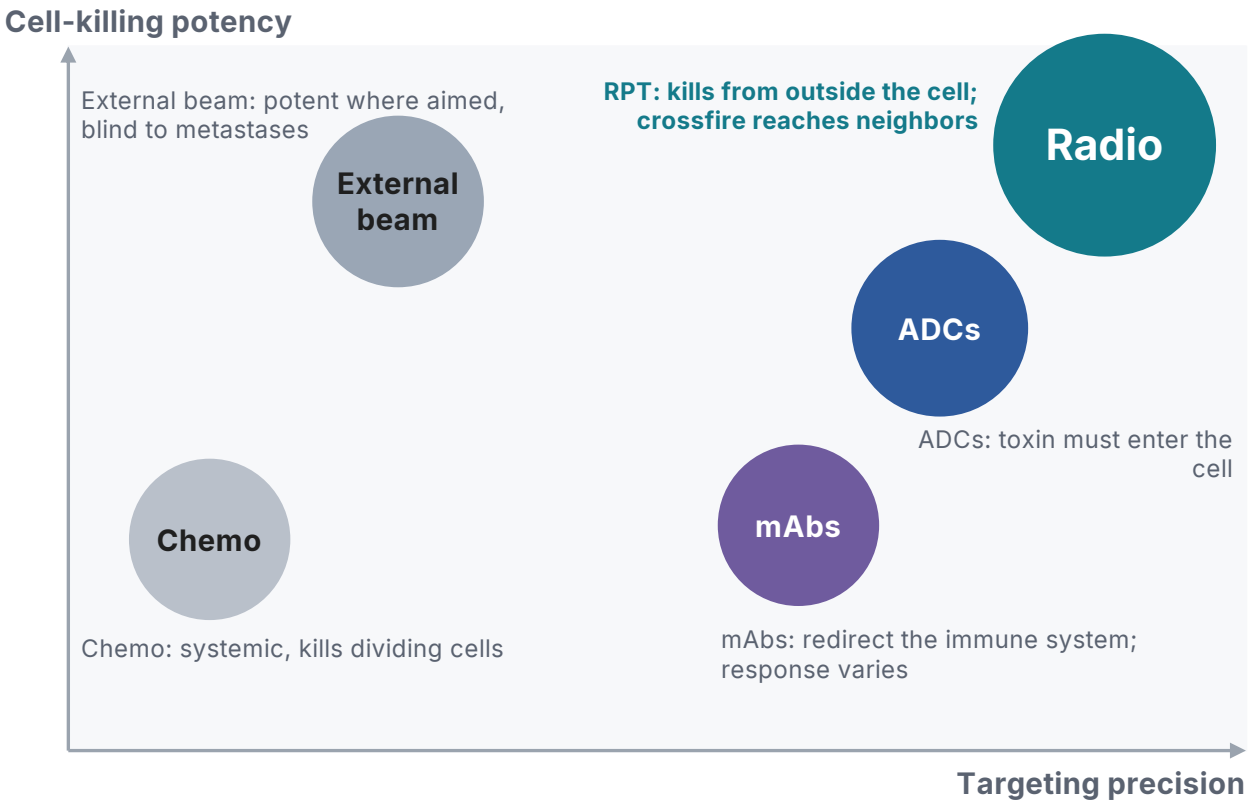

- Equipment calibration
- Materials testing
- Weld and Structure Inspection
- Flow and Wear Monitoring

Semiconductor manufacturing

- Silicon doping
- Tracer analysis & characterization
- Defect identification

Radiopharmaceuticals combine antibody-grade targeting with a cancer killing isotope payload.

Many drug developers rely on specialized external partners for isotope production and supply.

The payload is the isotope

Isotope	Emission	Clinical status	Made in
Lu-177	Beta	Two approved drugs; $2.8B 2025 sales, +43% / +13%	Reactor (Yb-176 target)
Pb-212	Alpha	Phase 2 (AlphaMedix, VMT-alpha-NET); no approval yet	Thorium generator (Th-228 to Ra-224 to Pb-212); Oklo route
Tb-161	Beta + Auger	Phase 1/2; same targets as Lu-177 drugs (PSMA, SSTR); Telix/ITM, others	Reactor (Gd-160 target), same route as Lu-177
I-131	Beta + gamma	Approved for decades (thyroid, neuroblastoma); new programs in trials	Reactor

Every dose consumes isotope, so drug volume sets isotope demand.

Radiopharmaceuticals use biological targeting to treat advanced cancers in ways that are more directed than traditional treatments.

Source: Novartis FY2025 report

Scarcity and decay make isotope supply a mission-critical capability.

Commercial value comes from delivering the right isotope, in the right form, on schedule.

Critical demand

Low substitutability

Targeted cancer therapies, diagnostic imaging, industrial inspection, space power, defense, and research often require specific isotopes with few viable substitutes.

Constrained supply

Integrated capacity

Reactor access alone is not enough.

Feedstock, irradiation capacity, radiochemistry, quality systems, logistics, and specialized talent must work together.

Time-critical delivery

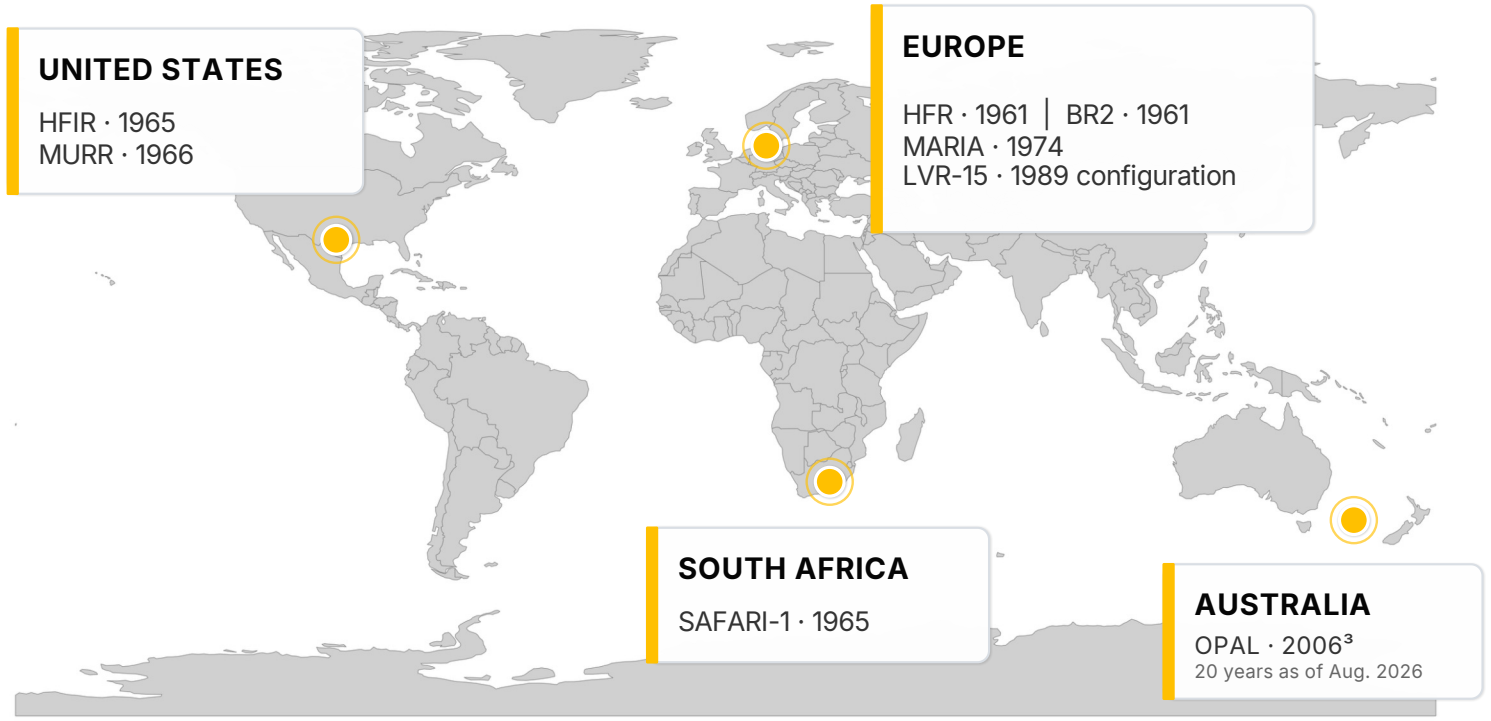

Decay-driven logistics

Many isotopes cannot be stockpiled.

Production, processing, release, transport, and customer use must run as one synchronized chain.

Medical isotope supply chain relies on an aging research reactor fleet.

Representative high-flux research reactors with medical-isotope production capability first reached criticality between 1961 and 2006 and most facilities serve multiple missions.

Representative facilities; not exhaustive. Years shown are first criticality unless otherwise noted. Status as of September 24, 2026.

WHY THE CONSTRAINT PERSISTS

1. **HFR remains operational**
   PALLAS is expected to take over from 2030 onward.[1]
2. **BR2 life extension is underway**
   SCK CEN is preparing the safety evaluation to support operation through 2036.[2]
3. **Capacity is shared**
   Most sites also support research, materials testing, training, or other national missions.
4. **Supply is product-specific**
   Domestic capability exists, but no single U.S. facility supplies every isotope or customer need.

U.S. capability exists but supply remains fragmented, product-specific, and dependent on shared infrastructure.
Oklo's deployment of isotopes assets are being designed to add dedicated, flexible capacity aligned to customer schedules.

Sources: [1] NRG PALLAS, "Curium and NRG PALLAS sustain continuity..." (May 21, 2025); [2] SCK CEN, "BR2 research reactor rejuvenated..." (Jan. 16, 2025); [3] ANSTO, "Celebrating 20 years of OPAL" (Aug. 12, 2026).

Oklo integrates critical isotope production steps to reduce handoffs and supply chain complexity.

Oklo is starting where nuclear capability is differentiated, then moving downstream only where it improves customer value and economics.

Legacy Model

Multiple sites and transfers

Reactor — ***Site 1***

Processing facility — ***Site 2***

Manufacturer — ***Site 3***

Customer — ***Site 4***

1

Target feedstock

Source & fabricate

2

Irradiation

Transmute targets

3

Processing

Separate & purify

4

Product finishing

Customer-grade form

5

Therapy manufacturing

Drug product

6

Clinical use & delivery

Patient / mission

Partner downstream where customers already have differentiated drug development, sterile manufacturing, clinical, and distribution capabilities.

We have done this before, and it’s resonating with customers.

Groves-1, Lockhart, Texas: From empty field to working reactor in under a year

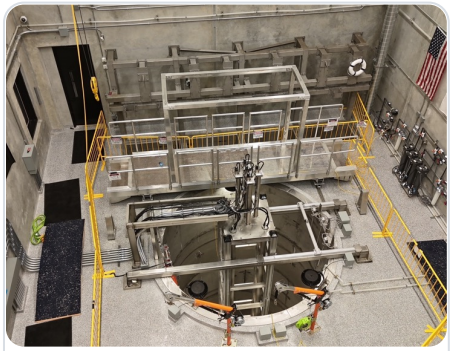

An empty field

Main construction done in 229 days

Operational in just over 11 months

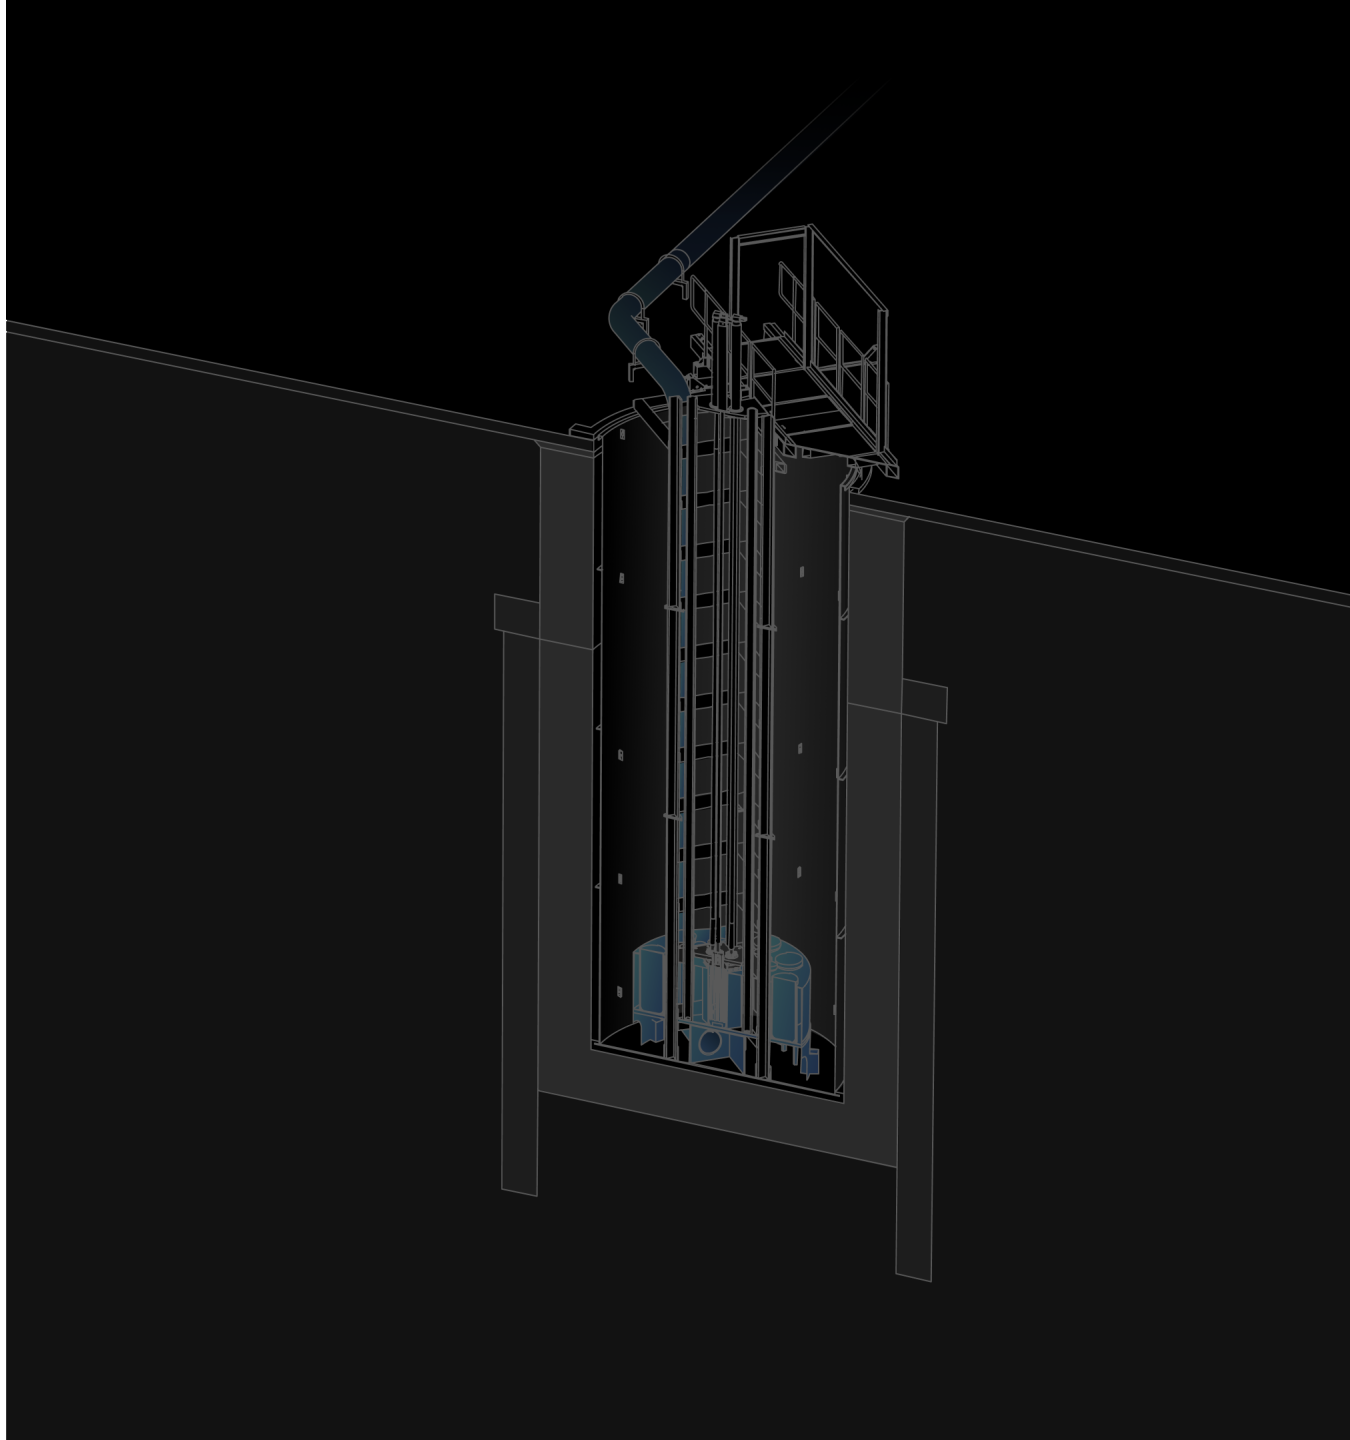

Reactor started up August 5, 2026

Groves-2

Built with full federal oversight, and to our knowledge the fastest privately funded and sited reactor build in history.

A repeatable playbook, with local permits and community engagement as step one, then design, construction, federal approval, and startup.

Technology overview

Commercial isotope production is a six-step operating system.

Every step must be synchronized to deliver customer-grade material before decay erodes value.

1 → 2 → 3 → 4 → 5 → 6

Target sourcing & fabrication

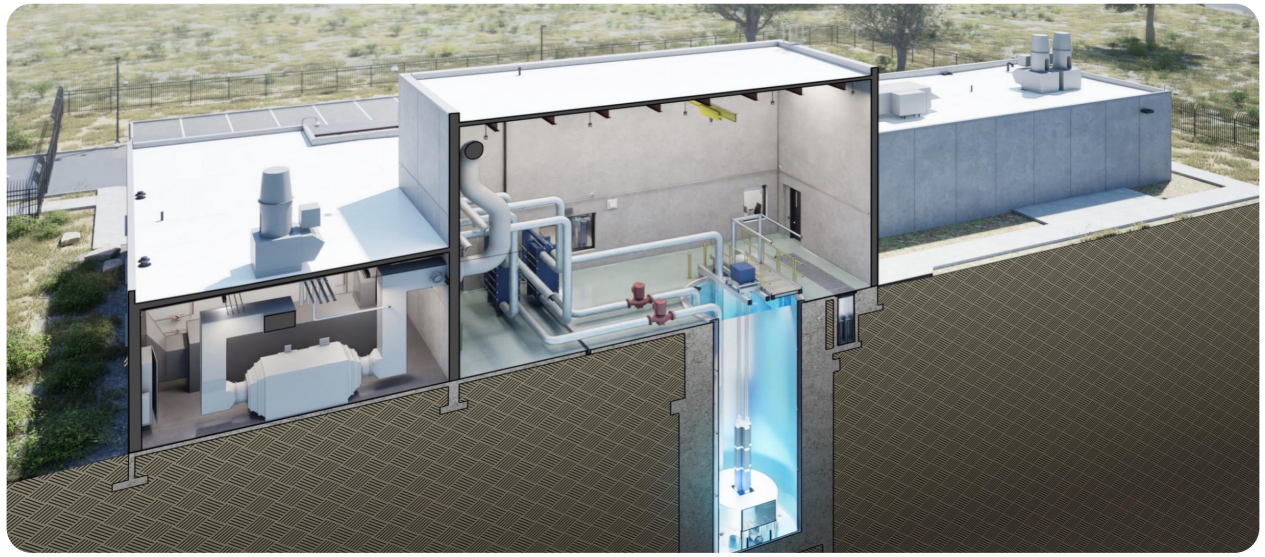

Irradiation

Shielded transfer & hot cells

Chemical separation & purification

Finishing, testing & release

Packaging, logistics & customer use

The operating challenge

- Match irradiation conditions to target material and desired yield
- Move material safely and quickly into shielded processing
- Control impurities and achieve the customer's chemical form
- Release, package, and ship within the usable time window

Commercial success comes from running reactor operations, chemistry, logistics, and delivery as one integrated system.

Our commercial Isotope reactors are designed for high-volume production.

The commercial production reactors are modular reactors designed for commercially dedicated isotope production and the heart of Oklo Isotopes' production facilities

Compact

Small footprint; multiple reactors per facility

Commercially dedicated

100% of capacity expected to be allocated to commercial isotope production.

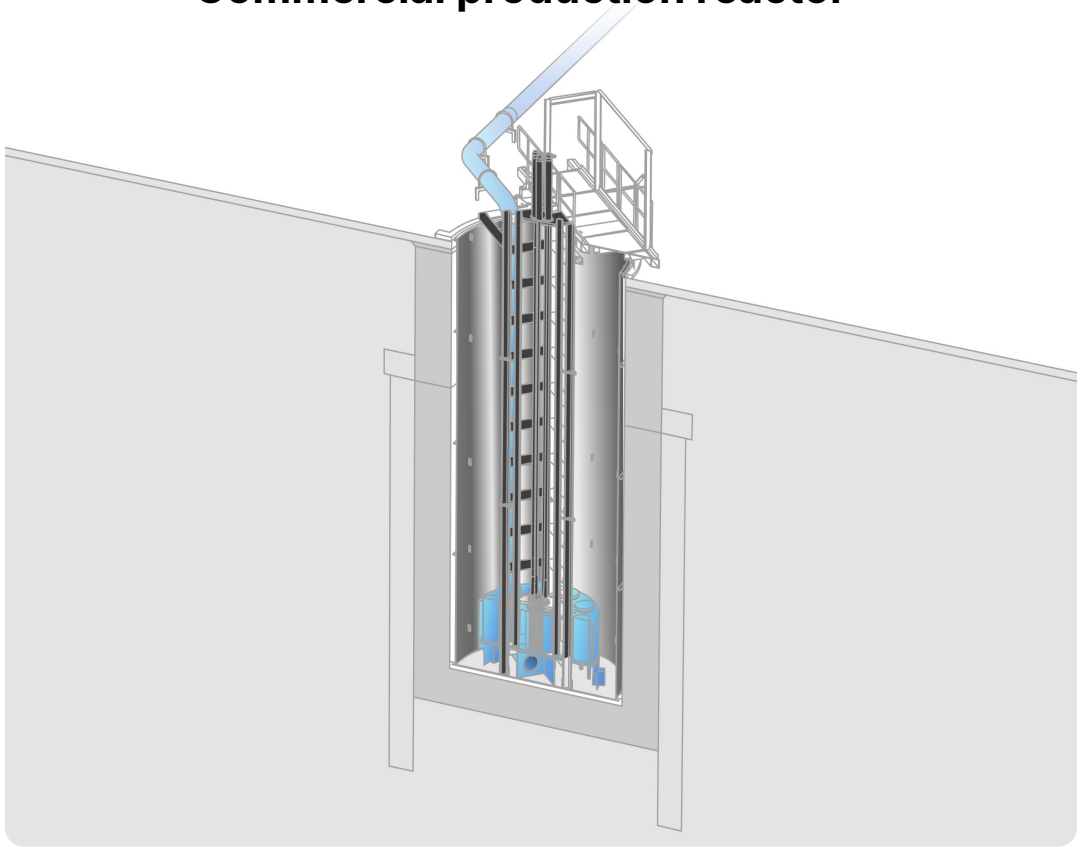

Multi-product capability

Different feedstock capsules can run simultaneously in parallel positions.

Modular & domestic

Capacity grows by adding reactors. US-sited supply chain reduces geopolitical exposure.

Commercial production reactor

The reactor is the foundation of Oklo's vertically integrated isotope production system.

The real advantage is the capability built around the reactor: the chemistry, quality, and logistics that turn irradiated targets into product.

Customer specification & qualification

Release testing, QA, traceability & change control

Product finishing, packaging & logistics

Chemical separation & purification

Target handling, shielded transfer & hot cells

Dedicated irradiation capacity

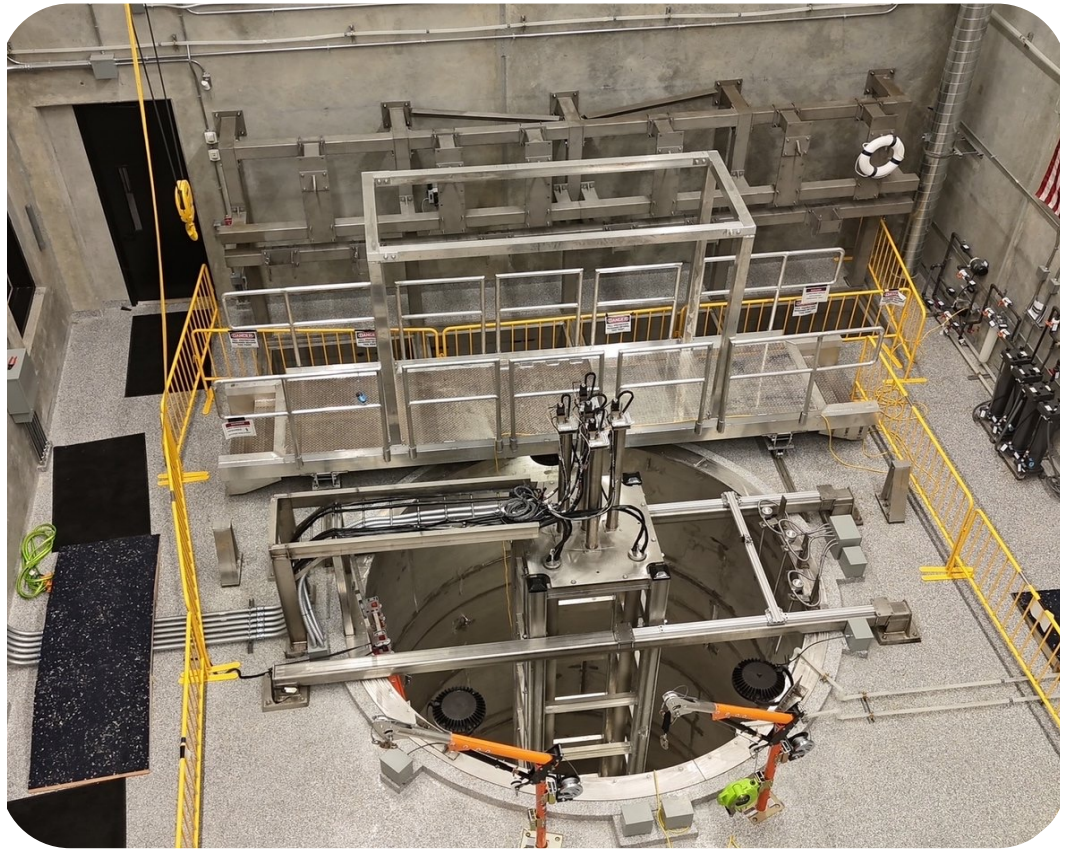

Oklo is building an integrated production system

- One team accountable end to end
- Reactor and chemistry designed to work together
- Quality controls built in from the start
- Delivery schedules and logistics planned up front
- Operating experience that carries over to each new site

Integrating irradiation, processing, quality, product finishing, and delivery is intended to reduce handoffs and improve supply reliability.

Groves-1 closed the operating loops that matter before commercial scale.

The project created real data, procedures, and organizational capability across the full deployment lifecycle.

CAPABILITIES DEMONSTRATED

- Design translated into as-built systems
- Commercial procurement and factory acceptance
- Installation, integrated testing, and commissioning
- Safety basis, procedures, and DOE readiness reviews
- Training, qualification, maintenance, and radiation protection
- Fuel receipt, loading, startup testing, and first criticality

Groves-1 reduces deployment risks; Groves-2 is expected to prove commercial production and customer delivery.

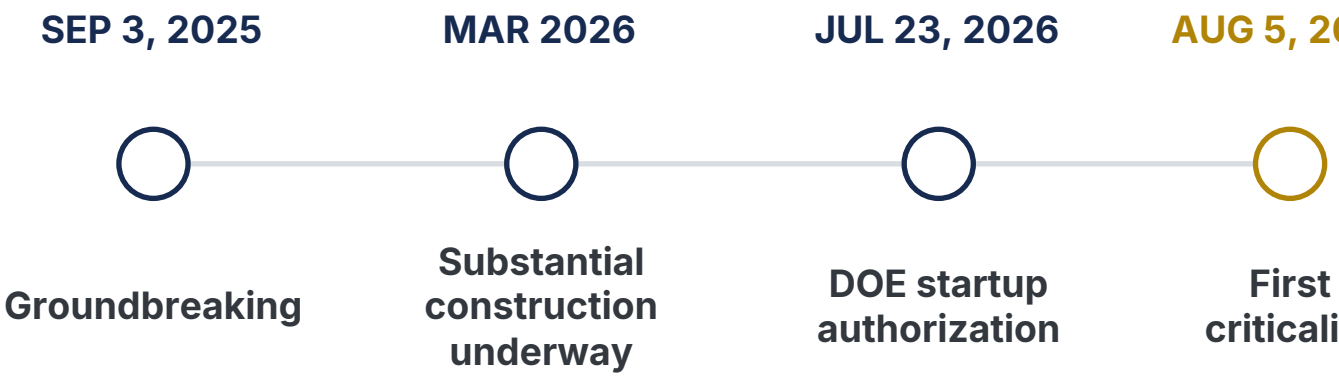

Commercial isotope projects could accelerate value creation

Groves-1 established initial execution and cost benchmarks from which we aim to improve.

Groves-1 demonstrated that nuclear projects can be developed at record speed.

Execution timeline

229 DAYS

To substantial construction

< 1 YEAR

Groundbreaking to criticality

Groves-1 gives Oklo measured cost, schedule, supplier, and operating data that can inform future project estimates.

Subsequent assets are designed to benefit from repeatability.

Cost and schedule improvement should come from repeating proven work while scaling only the components required for commercial output.

Engineering

Repeat designs, calculations, specifications, and as-built lessons.

Supplier

Qualified vendors, commercial terms, acceptance testing, and lead-time data.

Site execution

Standard layouts, construction sequencing, work packages, installation, and field controls.

Start-up readiness

Safety programs, procedures, training, review packages, and authorization experience.

Operating organization

Experienced leaders, maintenance, radiation protection, security, and startup teams.

Project controls

Measured quantities, productivity, schedule logic, contingencies, and risk registers.

Learning and reuse can improve future cost and schedule performance, but each project must still be underwritten for its specific site, scope, product mix, and customer commitments.

Groves-1 converts shared nuclear capabilities from plan to operating experience.

Oklo now has a team that has taken a nuclear facility from greenfield development through authorization, construction, startup, and operation.

GROVES-1 | OPERATING PROOF

Demonstrated at Groves-1

- Commercial supplier execution and factory acceptance
- Installation, integrated testing, and commissioning
- DOE authorization, readiness review, and startup
- Operating procedures, training, maintenance, and security
- First criticality and an in-house operating organization

SHARED EXECUTION ENGINE

CARRIES FORWARD

AURORA | POWER EXECUTION

Capabilities that inform Aurora

- Supplier qualification, acceptance testing, and lead-time visibility
- Construction planning, work packaging, and field controls
- System integration and commissioning discipline
- Training, maintenance, radiation protection, and operating readiness
- Measured project controls, schedule data, and risk management
